

Successful Cologne Mobility

The planned mobility to Cologne, part of the ERPSW project, was successfully completed in May 2025. Although the scheduled company visits were canceled due to various reasons, two hands-on workshops were organized instead.

The first event involved teachers living in Germany, while the second took place in Cologne with participants from Turkey. Participants experienced ERP module content in a practical way, engaging in group work and presentations.

Interaction and Guidance

Communication with participant teachers was maintained throughout the process. Technical content and guidance were shared regularly via a WhatsApp community group, with real-time responses to questions. This method provided additional support in the digital learning environment.

Training Content Finalized

Training modules on the project's four key themes (Introduction to ERP, CRM, Sales and Marketing, Software and Data Analysis) have been completed. All content was prepared in a reusable format for both teachers and vocational training providers. SEO-optimized blog posts were also created to expand the project's digital reach.

Website Launched

The official project website is now live and available in Turkish, German, and English. It provides access to project documents, training materials, blog articles, and ongoing video recordings.

All content is structured for permanent accessibility to ensure long-term digital visibility.

Activities Nearly Completed

With face-to-face implementations in Istanbul and Cologne, most of the core project activities are now complete. All partners are currently focused on dissemination, finalizing the content, and conducting evaluations.

Information & Dissemination Channels

The project's communication and dissemination efforts continue via the following digital platforms:
